

DIRECTIONS: Apply when drains will not be used for 6 to 8 hours. **First time users:** Treat every drain 5 consecutive days. **Maintenance:** Treat once per month. Mixing Bio-Clean with **warm** water works best – mix well and let sit for no more than 30 minutes before pouring.

Sinks/Tubs>Showers: Mix 1 tablespoon of Bio-Clean with 1 pint of water.

Floor Drains: Mix 3 tablespoons Bio-Clean with 3 pints water.

Toilets: Mix 2 tablespoons Bio-Clean with 2 pints water. Pour mixture into toilet, then add 2 pints plain water to push more of the product out of the toilet and into the sewer line. Do not flush for several hours.

Multi-Story Buildings: Start the 5-day treatment in the basement or first level. Go up one floor and repeat until each floor has been treated for 5 days.

Septic Tanks/Cesspool: Mix 1 pound of Bio-Clean with 2 gallons of water for every 500 gallons of tank capacity. Let mixture stand for no more than 30 minutes and then pour directly into tank or closest drain or toilet to tank.

Septic Fields: Mix 2 pounds of Bio-Clean in 2 gallons water for every 50 feet of field pipe. Apply through distribution box, vent pipes, or clean out.

Outhouses: Mix 1 ½ cups of Bio-Clean in 1 gallon of water and pour on waste once per month.

Sewage Spills: Sprinkle a layer of Bio-Clean on top and keep moist until waste is gone. Large spills may require several doses.

Bio-Clean's microbes eat the waste that clogs drains and septic. They work best with bio-degradable cleaners. Use chlorinated, antiseptic, or anti-bacterial products sparingly.
